Table S3. Amount of Variance Explained in Effortful Control, Surgency and Hyperactivity-Inattention by the Overall Model (Independent Variable and Covariates)

N=120				
Overall Model				
Dependent Variable	F	Std. Error of the Estimate	R <sup>2</sup>	p-value
Effortful Control	5.769	.54	.25	.001
Surgency	1.379	.77	.12	.21
Hyperactivity-Inattention	1.976	.86	.16	.06

Note: The “R<sup>2</sup>” represents the variance explained by the overall model on the dependent variables and the p-value represents the value of statistical significance of the effect of the overall model on the dependent variables. The overall model includes the following variables: Age when the child took part in the eye tracking study; the age of the child when the parents completed the questionnaire; the type of the questionnaire booklet; sex; total number of trials completed by participants in the eye-tracking studies; total number of fixations detected; the particular condition that each infant took part in the eye-tracking study; and the variable of mean fixation duration

Table S4. Multiple Regression model presenting the Multiplicative Effect of Fixation Duration x Infant Age on Effortful Control, Surgency and Hyperactivity-Inattention

N=120 (19-58 months of age)							
Independent Variable: Mean Fixation Duration x Infant Age							
Dependent Variable	B	$\beta$	t	95% CI for $\beta$ Lower Bound	95% CI for $\beta$ Upper Bound	R <sup>2</sup>	p-value
Effortful Control	.05	.07	.90	-.06	.18	.005	.36
Surgency	-.17	-.20	-1.92	-.35	.006	.03	.05
Hyperactivity-Inattention	-.07	-.07	-.73	-.29	.13	.004	.46
